

JavaScript Assignment: Real-Time Currency Converter

Objective:

Build a real-time currency converter web application using JavaScript, HTML, and CSS. The application should support at least **10 currencies** and fetch real-time exchange rates for conversions.

Major Instructions:

1. Functional Requirements:

- Users should be able to:
 - Select a **source currency** (the currency they have).
 - Select a **target currency** (the currency they want to convert to).
 - Enter an amount to convert.
 - Click a button to see the converted amount in the target currency.
- Display the **real-time conversion rate** used for the calculation.
- Include at least **10 different currencies** for selection.
- Handle invalid inputs gracefully (e.g., empty fields or non-numeric values).

2. API Integration:

- Integrate a free **currency exchange API** to fetch live exchange rates for the currency conversion.

3. User Interface:

- Create a user-friendly interface using **HTML** and **CSS**.
- Include dropdowns for selecting currencies and an input field for the amount.
- Display the converted amount and the conversion rate clearly.

4. Additional Features:

- Include a "Clear" button to reset all inputs and outputs.
- Add a button to **copy** the conversion result to the clipboard.

5. Validation:

- Ensure input fields are not left empty.
- Ensure the entered amount is a valid number greater than zero.

6. Code Quality:

- Follow clean and readable coding practices.
 - Comment your code to explain your logic clearly.
-

Submission Guidelines:

1. Plagiarism Check:

- **Zero marks for plagiarism.** Any copied code will lead to disqualification.
- Your code should be original. Use comments to explain your thought process.

2. Submission Deadline:

- Submit the project by **[Insert Date & Time]**.
- **Late submissions will not be accepted.**

3. File Structure:

- Submit all your project files (HTML, CSS, JavaScript) in a compressed .zip folder.
 - Name the folder as Currency_Converter_[YourName].
-

Evaluation Criteria:

1. **Functionality** (40 points):
 - Working real-time currency conversion with correct API integration and input validation.
 2. **Design** (20 points):
 - User-friendly, responsive, and visually appealing interface.
 3. **Code Quality** (20 points):
 - Well-organized, clean, and well-documented code.
 4. **Originality** (20 points):
 - No plagiarism. Code must be your own.
-

Additional Notes:

- **Late submissions will not be accepted.** Ensure that you submit your project on time.
- Ensure that all inputs are validated, and your application handles edge cases effectively.

Good luck!
